

Intellectual Property

“Intellectual Property” is the body of law that protects the fruits of human intelligence: our inventions, our creative works, and the logos and brand names that we adopt for the goods and services we sell. There are three major types of intellectual property protection – patents, trademarks and copyrights. Generally speaking, patent protection is available for inventions that are useful, such as a novel product, a new method of doing business, or a new process for making or using something, and may also be available to protect a new and original ornamental design for an article of manufacture; copyright law protects original works of authorship such as books, music, artwork, photographs, web pages and software; and trademark law protects the brand names used for goods or services, logos, as well as distinctive product and packaging designs. Trademark law is part of the law of unfair competition, which also addresses trade secret protection, unfair competition and deceptive and unfair trade practices.

Sometimes an invention or work is eligible for more than one type of protection. Take, for example, a lamp with an elaborately sculpted base that incorporates a novel on-off switch. The creator of this lamp might be able to claim copyright protection in the lamp’s shape as a sculpture, apply for a design patent to protect the ornamental features of the lamp, and apply for a utility patent on the on-off switch invention. Over time, if the public came to associate the lamp’s design with a particular source of lamps, as we have learned to associate the shape of a Coca-Cola® bottle with cola manufactured by the Coca-Cola Company, then the lamp’s shape could be claimed as a trademark. An attorney can help you to determine what types of intellectual property protection are available to you and how best to protect your intellectual property.

MORE ABOUT TRADEMARKS

What is a trademark?

The term “trademark” (or “mark”) refers to any word, name, symbol or device, or any combination of these, that is used in commerce to designate, identify and distinguish the goods of one manufacturer or seller from the goods manufactured or sold by others, and to indicate the source of the goods. In common language, a trademark is a brand name or other brand-identifying device (such as the color

pink used by Owens-Corning for its brand of fiberglass insulation, the Pillsbury doughboy, or NBC's three-tone sound mark). Marks that are used to identify or advertise services rather than goods are often referred to as "service marks." Rights in a trademark are acquired and maintained only by use, however, as discussed below, registration does provide you with additional benefits and rights.

The primary function of a trademark is to indicate the origin of goods or services. Trademarks also enable consumers to identify products and service-providers so that they can either look for them again or avoid them. In this way, a trademark represents the quality and uniformity of the goods bearing the mark. The goal of trademark law is to protect the source-identifying and quality-designating functions of trademarks. The first party that acquires rights in a trademark for a particular good or service (the "senior user") owns certain exclusive rights in the mark – namely, the right to prevent others (called "junior users") from creating confusion by using the same or a similar mark for similar goods or services. Some trademarks are so famous that third party use of them for any goods or services is likely to cause confusion and infringe the senior user's rights.

Selecting a trademark

Businesses often desire to adopt a trademark that clearly evokes or describes their product. However, such marks may be impossible or very difficult to protect. Words that are the generic name for the user's goods or services cannot function as trademarks at all. For example, the term "apple" cannot be appropriated as a trademark for apples. Words that are descriptive of the user's goods or services may be protectible as trademarks, but only under certain circumstances which your attorney can explain to you. The most easily protectible trademarks are those that are arbitrary or fanciful when applied to the user's goods or services. Kodak®, Xerox® and Exxon® are examples of fanciful marks, while "apple" used as a trademark for computers is arbitrary.

Before adopting a trademark it is advisable to have an attorney evaluate whether the term or device is eligible for trademark protection and conduct a "trademark search" to find out whether the mark is already owned by another party. While such searches do not guarantee that the desired mark is available for adoption, they minimize the risk

that the mark you adopt will infringe a third party's rights.

Many people believe that they automatically have the right to use the name of their corporation, LLC or other business as a trademark. This is not the case. Just because the state allows you to form a business entity under a given name does not mean the name does not infringe someone else's trademark.

Registering Your Trademarks

Trademarks may be registered with the United States Patent and Trademark Office ("PTO") and/or the Florida Secretary of State. Since trademark rights arise from use, registration is not necessary to create rights. However, by registering a trademark with the PTO, you can secure trademark rights in areas of the United States in which you have not yet used your mark. Federal and state registrations also provide advantages in lawsuits to enforce trademark rights. An attorney can advise you as to whether a federal and/or state registration would be advisable.

In order to be eligible for federal registration, a mark must be used in commerce that may lawfully be regulated by Congress – for example, interstate commerce – at the time the registration is granted. Generally speaking, the use that is required to register a mark for goods consists of placing the mark on the goods, or on their packaging, tags or labels; while, for services, the mark must be used or displayed in the advertising or sale of the services and the services must actually be rendered. You may file a federal application (not Florida) to register a trademark before you use it if you have a bona fide intent to use the mark, but the registration cannot issue until you commence actual use.

The total time for a federal trademark application to be processed may be from almost a year to several years, depending on the basis for filing and the legal issues which may arise in the PTO's examination of the application. Federal trademark registrations must be renewed every ten years and certain filings are required between the fifth and sixth year following registration.

The federal registration symbol ® may be used once the mark is actually registered with the PTO or, in some cases, if the mark is registered in a foreign country. Use of the ™ and SM symbols is not required, but may discourage others from infringing your mark; these two

symbols may be used before the mark obtains federal registration.

Enforcement of Trademark Rights

Infringement of a trademark occurs when someone other than the trademark owner uses the mark, or a similar mark, on goods or services in a manner that is likely to cause confusion concerning the source or origin of the parties' respective goods or services or to suggest an affiliation or an endorsement of the junior user's goods or services by the owner of the mark. Dilution occurs when someone uses a similar mark in a manner likely to diminish the distinctiveness of or tarnish a famous mark. Enforcement of federally registered marks can take place in either federal or state court; while enforcement of Florida-registered marks typically takes place in state court. A mark that is not registered may still be eligible for protection in federal and/or state court depending upon factors which a trademark attorney can explain to you. The remedies available to a successful trademark owner in an infringement lawsuit may include an injunction; a monetary award; impoundment and destruction of infringing items; and, in exceptional cases, recovery of the trademark owner's attorney's fees. Special procedures and remedies, including potential criminal liability, apply in cases involving counterfeit goods or goods labeled with counterfeit marks (such as counterfeit purses).

MORE ABOUT COPYRIGHTS

What does Copyright Protect?

Copyright protects "original works of authorship." Most writings and artistic creations are subject to copyright protection including books, photographs, musical recordings and computer programs. Copyright arises automatically as soon as a work is fixed in a tangible medium of expression; that is, written down, painted, filmed, recorded, etc. Copyright gives the author of a work a bundle of exclusive rights, including the right:

- To reproduce the work in copies or phonorecords;
- To prepare derivative works based upon the work;
- To distribute copies or phonorecords of the work to the public by sale or other transfer of ownership, or by rental, lease, or lending;
- To perform the work publicly, in the case of literary, mu-

sical, dramatic, and choreographic works, pantomimes, and motion pictures and other audiovisual works, and in the case of sound recordings, to perform the work publicly by means of a digital audio transmission; and

- To display the work publicly, in the case of literary, musical, dramatic, and choreographic works, pantomimes, and pictorial, graphic, or sculptural works.

Copyright does not protect the ideas that are expressed in a work; it is the tangible expression of the idea that is protected. However, the line between “idea” and “expression” is not always easy to identify.

Who Owns the Copyright in a Work?

Many copyright disputes involve competing claims of ownership of a copyright. Your attorney can help you make sure you own or have a right to use the copyrighted works such as photographs, illustrations, designs, software, or other items that your business may purchase, commission from freelancers, use or supply to others.

Generally, the person who actually creates a work owns its copyright. This is the case even if the work was commissioned and the creator was paid to create it. However, there are exceptions. As a general matter, employers own the copyrights in the works that their employees create within the scope of their employment. Special rules are applied to determine who qualifies as an “employee” for this purpose. In addition, with respect to a limited number of types of works – such as encyclopedias, tests, audiovisual works, and compilations – the party that commissions a non-employee (e.g., freelancer) to create the work pursuant to a written work-for-hire agreement signed by both parties will be considered the “author” and owner of the copyright. Ownership of a copyright can also be acquired through a written assignment from the author.

How Long Does Copyright Protection Last?

For most works created after January 1, 1978, copyright protection lasts for the life of the author plus 70 years. For an anonymous work, a pseudonymous work, or a work made for hire, the copyright term is 95 years from the year of first publication or 120 years from the year of creation, whichever expires first. Your attorney can help

you to determine the length of copyright protection for works that predate 1978.

Registering Copyrights

Copyrights are registered with the Copyright Office of the Library of Congress by submitting an application to the Registrar of Copyrights along with a modest fee and a “deposit” of the work being registered. The particular application form that must be used and the deposit requirements vary depending on the type of work being registered. Registration is not required to own a copyright. However, the cost of registering a copyright is fairly modest and the benefits from registration can be significant. In most cases, registration is a prerequisite to filing a lawsuit to enforce the copyright. Furthermore, with some exceptions, certain infringement remedies, such as statutory damages and attorney’s fees, are only available if the copyright is registered before the infringement begins.

Enforcement of Rights in a Copyright

A copyright is infringed when someone violates one of the exclusive rights of the copyright owner; for example, by using a photograph in an ad campaign without the photographer’s permission, installing software on more than one computer that is licensed only for use on a single computer, or creating a derivative work (such as a sequel) based on a copyrighted work. Any lawsuit asserting claims of copyright infringement must be brought in federal court. Remedies include injunctive relief and recovery of damages.

MORE ABOUT PATENTS

What is a Patent?

There are three types of patents: utility patents, design patents and plant patents. A utility patent may be granted to one who invents or discovers a new and useful process, machine, article of manufacture, composition of matter, or a new useful improvement of any of these. A design patent may be granted to one who invents a new, original and ornamental design for an article of manufacture. A plant patent may be granted to one who invents or discovers and asexually reproduces any distinct and new variety of plant. Patent protection is only available for inventions and designs that are novel and would not have been obvious

to a person of ordinary skill in the art as of the time the invention or design was made. In addition, utility patents are only available if the invention is useful. In applying for a patent, a prototype is not typically required; however, your patent attorney or patent agent can explain this in more detail.

A U.S. patent gives the owner the right to exclude all others from making, using, selling and importing into the U.S. the invention defined by the claims of the patent. In exchange for this exclusive right, the patentee is required to disclose the invention in the patent application with sufficient detail so that a person “with ordinary skill in the art” is able to understand how to make and use the invention without undue experimentation.

The patent “right to exclude” does not grant or imply that the owner has the affirmative right to make, use or sell the patented invention. If the owner’s patented invention infringes another person’s patent, the owner may not be able to exploit the invention without a license from that person.

Because patent rights are territorial, the patent right to exclude is generally limited to the U.S. and its territories (although there are limited circumstances under which activities aimed at a foreign market can infringe a U.S. patent). An inventor who desires to prevent others from exploiting an invention in foreign markets would need to seek patent protection in each market.

How are Patents Obtained?

Patents are granted by the PTO. As a patent application is a highly technical document, it is advisable to have it prepared by a patent attorney or patent agent registered with the PTO. Under U.S. law, an inventor has only one year to file a patent application after the invention is offered for sale or publicly disclosed. Other countries do not offer even this one-year grace period. Thus, it is generally advisable to consult with an attorney promptly after conceiving your invention. Before filing a patent application, it is advisable to have your attorney conduct a patent search to make sure that your invention is novel and not obvious in light of prior inventions. Once the patent application is filed, a PTO examiner will evaluate whether the invention or design qualifies for patent protection. PTO examiners often require modifications to the patent application. This process can take several

years and involve a substantial amount of interaction between the PTO examiner and your attorney. Because patent applications are so technical and the examination process is generally fairly time-consuming, the cost of obtaining patent protection is significantly greater than the cost of registering a trademark or copyright.

How Long does Patent Protection Last?

For applications filed on or after June 8, 1995, the term of a utility patent will generally expire 20 years after the application date. Design patents last 14 years from the date the patent issues. There are exceptions to these general time frames, which your patent attorney can explain. Once a patent issues, patent maintenance fees must be paid at designated times during the life of the patent; if a maintenance fee is not paid, the patent expires. Upon expiration of the patent, the public is free to use the invention.

Patent Ownership and Licensing

Patents can only be granted to inventors; that is, to the persons who have engaged in the mental act of invention. Corporations and other business entities cannot initially own title in a patentable invention. For this reason, it is advisable to put appropriate invention ownership agreements in place with all employees and consultants who may come up with inventions of importance to your business.

Patent rights can be assigned or licensed, but there are restrictions on how a patent owner can use the “clout” of a patent to extract royalties or other benefits from third parties. For example, generally speaking, a patent license may not lawfully endure beyond the term of the licensed patent. Before licensing rights under a patent, it is advisable to consult with an attorney regarding the permissible scope of patent licensing.

Enforcement of Patent Rights

The federal courts have exclusive jurisdiction over patent infringement suits. Relief in patent litigation includes injunctions extending for the life of the patent, money damages, and enhanced damages and attorney’s fees in exceptional cases. In addition, under certain circumstances, a patentee can obtain an exclusion order from the U.S. International Trade Commission to bar importation of infringing goods from foreign countries.

OTHER TYPES OF INTELLECTUAL PROPERTY

There are other types of intellectual property such as trade secrets and intellectual property disputes often implicate the law of unfair and deceptive trade practices. There are also other areas of law which often involve intellectual property issues, like computer and internet law, franchise law and licensing. This pamphlet does not contain a discussion of these areas. You should consult with a competent intellectual property attorney if you believe you have any legal issue related to any of the areas of law described in this pamphlet.

This pamphlet is published by The Florida Bar Public Information and Bar Services Department as a service for consumers. Single copies of this pamphlet and others are free upon request by sending a self-addressed, legal size stamped envelope for each pamphlet requested to Consumer Pamphlets, The Florida Bar, 651 E. Jefferson St., Tallahassee, Florida 32399-2300. To view a list of the entire consumer pamphlet series, visit The Florida Bar's Web site www.FloridaBar.org. Ordering information and the full text of each pamphlet is available in the Public Information section of the Web site.
